View: Batches Being Processed by ProcesLink			X	X
Batch Management via Mouse Selectable Dropdown List			X	X
View: Machine Monitor - Overall View of Scanner, Edit, and Transform Fleet			X	X

CertainScan™ ProcessLink™

CertainScan ProcessLink™ is an interface that allows a third-party plug-in to interact with a batch produced by an OPEX scanner. CertainScan ProcessLink opens doors for many applications where more extensive, non-real-time processing can be offloaded to third-party software. The plug-in processes images and returns metadata back to CertainScan. It can correct existing metadata, including indexes, and reclassify pieces in the batch. ProcessLink works with a batch that can be submitted to a customer/vendor supplied plug-in after the scanning stage or at the edit stage for further processing. Up to five ProcessLink plug-ins can be chained to process each batch.
